

XJ150

Radio-frequency communication module (to use with controlling system)

56x80mm

- Radio communication system for controlling and supervising units
- Cover all application fields, from single benches to cold rooms and compressor racks
- The information coming from the controller are transmitted to an XJ100 module and directly sent to the XJ150 connected to the controlling and supervising unit
- Possibility to connect many instruments to the same XJ100
- XJ100 automatic "bridge" function to increase signal throughput between modules
- Easy to use
- Less installation time and costs
- High flexibility
- 0,25VA max power absorption
- Operating frequency: 433,5068MHz
- Range: 80m (no obstacles)
- Wall or panel mounting
- Power supply:
 - XJ100 (5Vdc directly from the controller);
 - XJ150 (5Vdc from PWS150J module)
